

Solution Requirement

Functional Requirements:

- * Import the food ordering dataset into Tableau.
- * Clean and prepare the dataset for analysis.
- * Generate business KPIs such as Total Orders, Revenue, Delivery Fee, and Average Rating.
- * Create interactive charts and visualizations.
- * Enable filtering based on meal type, payment method, and customer preferences.
- * Build an interactive dashboard.
- * Create a Tableau Story explaining business insights.

Non-Functional Requirements:

- * User-friendly interface.
- * Fast dashboard performance.
- * Accurate data visualization.
- * Interactive filtering capability.
- * Easy maintenance and future updates.
- * High reliability and consistency.

Expected Outcome:

The proposed solution provides a visual representation of customer ordering behaviour, helping restaurant owners and business managers identify trends, monitor performance, and make informed business decisions.
