

Proposed Solution

The proposed solution is to build an interactive Tableau dashboard that analyzes food ordering behaviour and consumer trends using historical order data.

The dashboard provides visual insights into:

- * Total Orders
- * Total Revenue
- * Delivery Fee
- * Average Customer Rating
- * Meal Type Distribution
- * Payment Method Preferences
- * Order Trends Over Time
- * Customer Behaviour Analysis

Interactive filters allow users to explore the data based on different categories and customer segments.

A Tableau Story is included to present the findings step by step, helping users understand key business insights and make informed decisions.

Expected Outcome

The solution enables businesses to:

- * Understand customer ordering patterns.
- * Improve customer satisfaction.
- * Increase operational efficiency.
- * Identify opportunities to improve sales and revenue.
- * Support strategic business planning through visual analytics.
