

Solution Architecture

Step 1: Data Collection

- * Collect food ordering data from the provided dataset.
- * Store customer, order, payment, delivery, and rating information.

Step 2: Data Preparation

- * Import the dataset into Microsoft Excel and Tableau.
- * Clean missing values and remove duplicate records.
- * Format fields and prepare data for analysis.

Step 3: Data Analysis

- * Calculate KPIs:
 - * Total Orders
 - * Total Revenue
 - * Delivery Fee
 - * Average Rating
- * Analyze ordering behaviour.
- * Analyze payment methods.
- * Analyze meal type preferences.

Step 4: Dashboard Development

Create interactive Tableau dashboards using:

- * KPI Cards
- * Bar Charts

- * Pie Charts
- * Line Charts
- * Filters
- * Legends
- * Dashboard Containers

Step 5: Story Creation

Develop a Tableau Story that explains:

- * Business Overview
- * Customer Behaviour
- * Revenue Trends
- * Meal Preferences
- * Key Business Insights

Step 6: Output

The final output is an interactive Tableau Dashboard and Story that enables users to analyze customer behaviour, monitor business performance, and make data-driven decisions.
