

Project Planning

Project Name:

Food Ordering Behaviour and Consumer Trends Dashboard

Project Objective:

To develop an interactive Tableau dashboard that analyzes food ordering behaviour, customer preferences, revenue trends, delivery performance, and customer satisfaction. The project aims to transform raw data into meaningful visual insights that support better business decisions.

Project Scope

The project focuses on:

- * Collecting and preparing the food ordering dataset.
- * Cleaning and transforming data for analysis.
- * Creating key performance indicators (KPIs).
- * Designing interactive dashboards with charts and filters.
- * Developing a Tableau Story to present business insights.
- * Generating reports that support decision-making.

Project Schedule

Phase 1: Planning

- * Define project objectives.
- * Identify stakeholders.
- * Gather project requirements.
- * Prepare the project plan.

Phase 2: Data Preparation

- * Import the dataset.
- * Clean and preprocess the data.
- * Validate data quality.
- * Organize fields for analysis.

Phase 3: Dashboard Development

- * Design KPI cards.
- * Create charts and graphs.
- * Add filters and interactive features.
- * Arrange dashboard layout.

Phase 4: Story Development

- * Build a Tableau Story.
- * Present business questions.
- * Highlight key insights.
- * Summarize findings.

Phase 5: Testing

- * Verify dashboard accuracy.
- * Test filters and interactions.
- * Validate calculated fields.
- * Improve dashboard performance.

Phase 6: Documentation and Submission

- * Prepare the final report.
- * Capture dashboard screenshots.
- * Record the demonstration.
- * Submit the complete project.

Resources Required

Software

- * Tableau Desktop
- * Microsoft Excel
- * PDF Reader

Hardware

- * Windows 10/11 Computer
- * Minimum 4 GB RAM
- * Intel Core i3 Processor or above

Deliverables

- * Cleaned Dataset
- * Tableau Workbook
- * Interactive Dashboard
- * Tableau Story
- * Project Documentation
- * Final Report
- * Project Demonstration

Expected Outcomes

- * Identify customer ordering patterns.
- * Analyze revenue and order trends.
- * Evaluate customer satisfaction through ratings.
- * Compare meal preferences and payment methods.
- * Provide interactive visual reports for business analysis.
- * Support informed business decisions using data visualization.

Risk Management

Risk	Mitigation Strategy
-----	-----
Missing or inconsistent data	Perform data cleaning and validation
Dashboard performance issues	Optimize calculations and visualizations
Incorrect KPI calculations	Test and verify all calculated fields
Delays in project completion	Follow the project schedule and review progress regularly

Conclusion

A well-structured project plan ensures the successful development of the Food Ordering Behaviour and Consumer Trends Dashboard. By following each phase systematically, the project delivers accurate visual analytics that help businesses understand customer behaviour, monitor performance, and make data-driven decisions.
